FIRE WEATHER FORECAST

NAME: WILLOW FIRE

FORECAST #2

UNIT: CA-LPF-001493

SHIFT: TUESDAY- JUNE 22, 2021

SIGNED: 

Pete Curran - IMET

TIME / DATE ISSUED: 1800hrs Mon 6/21/21

WEATHER DISCUSSION:

A low-pressure trough approaching the Bay Area will continue to bring cooler weather over the fire with higher humidity and good marine air intrusion into the lower elevations of the fire today. Drier conditions will continue over the higher elevations. Diurnal, terrain driven winds will prevail over the fire this morning, transitioning to south-southeast winds in the afternoon. Gusty afternoon and early evening winds along with areas of patchy low clouds and drizzle are possible as the low nears the coast. A gradual warming trend begins Thursday thru the weekend.

MONDAY: Cooler. Areas of low clouds, smoke and haze may impact lower elevations near the fire.

MAXIMUM TEMPERATURE (deg F):

75-80 degrees

MINIMUM RELATIVE HUMIDITY:

32-38%

20 FOOT WINDS:

Light and variable drainage winds 3-5mph early, then increasing south/southeast winds 5-8mph in the afternoon with gusty afternoon winds near 20mph over the higher elevations and ridgetops.

TRANSPORT WINDS: South/southeast at 10mph

LAL: 1

CHANCE OF WETTING RAIN: 0%

INVERSION: Coastal and Salinas Valley marine layer intrusion.

TUESDAY NIGHT: Cool and breezy. Patchy drizzle near the fire is possible tonight.

MINIMUM TEMPERATURE (deg F):

56-61 degrees

MAXIMUM RELATIVE HUMIDITY:

52-60%

20 FOOT WINDS:

South/southwest winds 8-12mph, gusting to 18mph in the early evening, then transitioning to diurnal slope winds after 9pm. Light south-east flow on the more exposed ridges overnight.

TRANSPORT WINDS: Southeast 8mph

LAL: 1

CHANCE OF WETTING RAIN: 0%

INVERSION: Increasing marine influence.

WEDNESDAY OUTLOOK:

An area of low pressure near the Bay Area will maintain below average temperatures and higher humidity with good RH recovery thru Wednesday. Onshore flow will bring marine air into the drainages across the lower elevations of the fire.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 3	TYPE OF FIRE: Wildfire
FIRE NAME: Willow	OPERATIONAL PERIOD: June 22, 2021 Day

UNIT: Los Padres National Forest	Prepared: Dan Felix, FBAN 

INPUTS

*** See Incident Weather Forecast for discussion and specific weather. ***

WEATHER SUMMARY:

Cooler with areas of low clouds.

Temp: Highs of 75-80 degrees.

RH: Minimum 32-38 percent.

Winds: Light and variable slope winds early, becoming south/southeast 5-8, gusts to near 20 in the afternoon.

GENERAL

The Fuel Moisture profiles across much of the nation are "off the charts" with records being set for Energy Release Component, 1000-hour fuels, etc. While the Central Coast may not be as bad as inland areas the indices have already exceeded record values for this time of year. Think of them as being like August instead of June. The terrain is very steep and convoluted. This not only hampers accessibility; it also gives the fire many chances to set up for rapid uphill runs as it finds places to come into alignment with sun, wind, and slope. The terrain winds are likely to dominate spread direction deep in the canyons, and the prevailing wind will influence the ridges. Pay close attention to the effect of the marine layer, if any, on the fire. Expect increasing fire activity as the day goes on.

Specific:

DIVS Q, W, Z – The southeast corner of the fire continues to be the most active. Changing weather conditions helped to keep the activity in check for most of the day yesterday and that pattern should do the same today. However, expect it to remain active and continue to spread to the east and southeast. This progression will be generally downslope, downcanyon but you can expect short uphill runs when the fire reaches favorable slopes. The confluence of Willow and Tassajara Creeks, and to the east remains a concern due to the potential if the fire crosses to the north. Should this occur, you can expect moderate uphill runs promoting progression to the north and east.

DIVS A, G, L – The north and west flanks of the fire are currently holding in the retardant and is not expected to cause much of a problem. Heat remains in the southwest corner of the fire in DIV A, but is surrounded by retardant. Keep an eye on this area since it is exposed to the ridge winds. An escape here would promote further spread to the north and east.

Air Operations: No major issues are anticipated.

SAFETY

This advantageous weather is predicted to hang in there for a couple of days, after that we will transition back to a more normal seasonal regime.

WILLOW FIRE SAFETY MESSAGE

"Safety isn't expensive, it's priceless" – Author Unknown

INCIDENT: Willow Fire

DATE: June 22, 2021

TIME: 0700-0700

Major Hazards and Risks:

- **DRIVING AND TRAFFIC** – Stay alert, keep your speeds down. Use road guard as needed.
- **STEEP TERRAIN AND ROLLING MATERIALS** - Watch for boulders that can roll out.
- **POTENTIAL FOR EXTREME FIRE BEHAVIOR** - All fuels are available and can burn aggressively. Ensure **LCES**.
- **DEHYDRATION** - Ensure you and your personnel are staying hydrated. Monitor your people.
- **HEAT ILLNESS/FATIGUE** – Watch your people, look for signs of heat illness and fatigue. Mitigate signs of fatigue by shading/cooling and disengaging if necessary. **Life First!**
- **WORKING UNDER HELICOPTERS AND AIRCRAFT** – Speaks for itself.
- **POISON OAK** – Avoid if at all possible, use poison oak lotion mitigation and decon your skin.

Note: All the people working on the Willow Fire are to be commended for their "Safety" record. Thanks!

Hydration is so Important

- You are about 60% water! The brain and heart are composed of 73% water, the lungs are about 83%, the skin is 64%, muscles and kidneys are 79%, and even your bones are 31% water.
- Your blood consists of about 55% plasma and 45% of blood cells. Of the 55% that is plasma, approximately 90% is WATER!
- Sports beverages during and after the shift can help maintain and replenish lost electrolytes as well as jump-start muscle glycogen (energy) stores to refurb for the next shift.
- When water balance is compromised, dehydration can occur. Use these symptoms to monitor yourself and a buddy:
 - Mouth feeling dry
 - Headache
 - Dizziness
 - Rapid heartbeat

Defensive Driving

- Be a defensive driver at all times.
- Drive like other drivers don't see you.
- Be courteous to all vehicle traffic to and from the fire area(s).
- Drive at or below posted speeds.
- Stay alert; give yourself an extra margin of SAFETY at all times.

Don't end up like this picture.

Use the following items to communicate situation to communications/dispatch.

1. CONTACT COMMUNICATIONS / DISPATCH (Verify correct frequency prior to starting report)

Ex: "Communications, Div. Alpha. Stand-by for Emergency Traffic."

2. INCIDENT STATUS: Provide incident summary (including number of patients) and command structure.

Ex: "Communications, I have a Red priority patient, unconscious, struck by a falling tree.

Requesting air ambulance to Forest Road 1 at (Lat./Long.)

"This will be the Division W Medical, POC is TFLD Jones. EMT Smith is providing medical care."

Severity of Emergency AND Transport Priority (Priority 1, 2, 3)	<input type="checkbox"/> RED / PRIORITY 1 Life or limb threatening injury or illness. Evacuation need is IMMEDIATE <i>Ex: Unconscious, difficulty breathing, bleeding severely, 2° – 3° burns more than 4 palm sizes, heat stroke, disoriented.</i>	
	<input type="checkbox"/> YELLOW / PRIORITY 2 Serious Injury or illness. Evacuation may be DELAYED if necessary. <i>Ex: Significant trauma, unable to walk, 2° – 3° burns not more than 1-3 palm sizes.</i>	
	<input type="checkbox"/> GREEN / PRIORITY 3 Minor Injury or illness. Non-Emergency transport <i>Ex: Sprains, strains, minor heat-related illness.</i>
